

GOVERNOR CUOMO, CLOSE THE INDIAN POINT NUCLEAR POWER PLANT

The Nuclear Regulatory Commission calls it the
highest earthquake risk reactor in USA

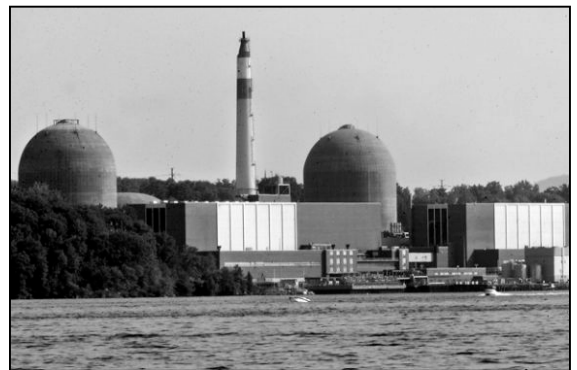

1,500 tons of radioactive waste are stored on site

Governor, we call on you to:

- **Publicly oppose federal relicensing of the plant.**
- **Tell the NYS environmental agency to continue withholding a water-use permit.**
- **Develop clean, green, efficient energy.**

Governor Cuomo has said that Indian Point should be closed; Attorney General Schneiderman has called for an immediate assessment of all public health and safety risks posed by Indian Point. The Nuclear Regulatory Commission is considering relicensing the plant for another twenty years. Governor Cuomo must officially oppose any license extensions.

Indian Point's reactors are located on the Ramapo earthquake fault just 24 miles from our neighborhood. The storage of 1,500 tons of radioactive waste onsite, with 1,000 tons to come if licenses are extended, increases the plant's danger to the metropolitan area. There is no viable evacuation plan. Shut it down!
